

# LOW PROFILE MONITOR

**B&G**

**All New!**  
Ready-to-Use Version!  
No Tablets!

## COCKROACH TRAP & INSECT MONITOR

Unlike competitors that put attractant in their glue, B&G uses a new highly proprietary process that actually applies a layer of attractant before the glue is applied. This provides the highest level of attraction to the insect.

- » Large trap with a low profile, fits under tables, and in confined spaces
- » Design prevents cockroaches and insects from escaping
- » Ideal as monitor in IPM programs

Openings in side generate increased attraction by allowing air to flow through the trap

Ramp design improves catch rate

- » Highly effective glue for positive catch rates
- » Food based attractant is safe yet very effective for all insects including cockroaches, silverfish, spiders, centipedes and earwigs.
- » Promotes "Green" Pest Control
- » Great for IPM Programs
- » Private label available

**Use in sensitive accounts where use of insecticides is limited or prohibited.**

**The Low Profile is shown to be a highly effective Bedbug Monitor and Trap.**

**BedBug Central recently reported, "The performance of this monitor has become noteworthy in bedbug treatment when compared to other general pest interception devices. During field testing of this interception device has shown to have the greatest recorded efficacy in capturing bedbugs than other similarly purposed glue boards."**

*Actual Bedbugs trapped by the Low Profile Monitor*
